

PLANTER BOXES

Our sturdy planter boxes are perfect for container planting, which has become increasingly popular with waterwise gardening. They consist of a traditional timber box constructed from massaranduba, with mortice and tenon joints, and a galvanised metal inner to protect the timber box from damage from watering. They are made with rust or galvanised wrought iron handles. Planter box (ref 9094) is suitable for planting with sphere and medium obelisk.
